3M™ Clinpro™ 5000
Anti-Cavity Toothpaste
(1.1% Sodium Fluoride)

Patient Information

Important Patient Information

What is 3M™ Clinpro™ 5000 Anti-Cavity Toothpaste (1.1% Sodium Fluoride) and what is it used for?

- 3M™ Clinpro™ 5000 Anti-Cavity Toothpaste is a high-concentration fluoride toothpaste
- It is used as part of a professional program for persons at high risk for cavities to prevent and control tooth decay
- It is usually used once a day in place of your conventional toothpaste unless instructed otherwise by your doctor or dentist

How do I use 3M™ Clinpro™ 5000 Anti-Cavity Toothpaste?

Place a thin ribbon or pea-sized amount of 3M™ Clinpro™ 5000 Anti-Cavity Toothpaste on a soft-bristled toothbrush and brush teeth for at least two minutes. After brushing, adults and children 6 years of age and older should spit out the toothpaste. Children 6-16 years old should then rinse their mouth thoroughly with water.

What other information do I need to know about 3M™ Clinpro™ 5000 Anti-Cavity Toothpaste?

- Children under 6 years old should not use 3M™ Clinpro™ 5000 Anti-Cavity Toothpaste unless recommended by a dentist or physician
- Do not swallow 3M™ Clinpro™ 5000 Anti-Cavity Toothpaste. If more than a pea-sized amount of toothpaste is swallowed, contact your doctor or a poison control centre

Keep out of reach of children under 6 years of age.

- Repeated swallowing of high levels of fluoride may cause chalk-like, lacy markings on teeth (dental fluorosis). For this reason, children with baby teeth (developing dentition) require special supervision to prevent swallowing
- Always talk to your health care provider before starting any new medications

Where should I go for more information about 3M™ Clinpro™ 5000 Anti-Cavity Toothpaste?

Talk to your dentist or health care provider.

Go to 3M.ca/Dental or call 1-888-363-3685.

Report any negative side effects to 3M Customer Care at 1-888-363-3685.

Don't change your routine – strengthen it.

Many factors can increase your risk of tooth decay, including:

- High-acid, high-sugar diets
- A history of cavities
- Lost teeth due to cavities
- Orthodontic brackets
- Dry mouth caused by medication or medical conditions

High risk? No problem.

The American Dental Association (ADA) recommends that moderate to high-risk patients can benefit from a high-concentration fluoride toothpaste, like 3M™ Clinpro™ 5000 Anti-Cavity Toothpaste (1.1% Sodium Fluoride).*

But what makes our toothpaste different?

3M™ Clinpro™ 5000 Anti-Cavity Toothpaste is more than just a toothpaste. Its anti-cavity formula is specifically engineered and scientifically proven to give patients like you the extra protection you need – easily, effectively, and without interrupting your busy schedule.

Read on to see how it works!

Extra protection – as easy as brushing your teeth.

Adding a high-strength toothpaste to your routine is easy: it can be used once a day in place of your usual toothpaste, unless directed otherwise by a doctor or dentist.

How to use 3M™ Clinpro™ 5000 Anti-Cavity Toothpaste.

Just like your normal toothpaste, place a thin ribbon or pea-sized amount of 3M™ Clinpro™ 5000 Anti-Cavity Toothpaste on a soft-bristled toothbrush and brush for at least two minutes.

When done brushing, children ages 6-16 should rinse with water. Adults, on the other hand, should wait at least 30 minutes before drinking or eating, to give the fluoride more time to work.

Innovative toothpaste to make every brush better.

3M™ Clinpro™ 5000 Anti-Cavity Toothpaste provides more fluoride than regular toothpaste to more effectively strengthen your teeth and better protect you from decay.

- Strengthens the entire tooth, not just the surface
- Gently cleans and whitens teeth
- Proven through 10 years of clinical usage
- Contains our innovative anti-cavity ingredient, functionalized Tri-Calcium Phosphate (fTCP)

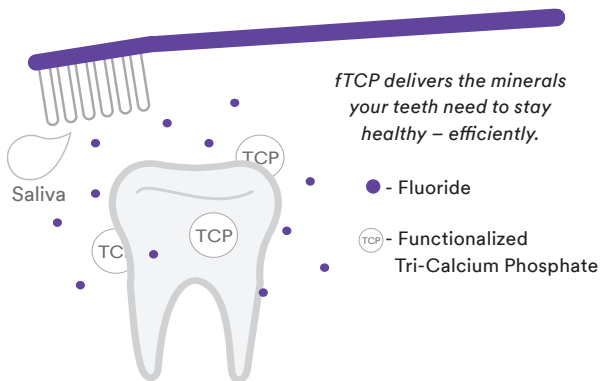

Available in two great flavours:
Vanilla Mint and Spearmint

Our key ingredient to a healthier smile.

Your teeth are made of minerals – calcium and phosphate – which can break down when exposed to cavity-causing, sugary and acidic food and drinks. Brushing with fluoride toothpaste gives your teeth the minerals needed to rebuild...but not all toothpastes deliver these minerals efficiently.

3M™ Clinpro™ 5000 Anti-Cavity Toothpaste contains functionalized Tri-Calcium Phosphate (fTCP). This special ingredient is designed to deliver calcium and phosphate – the building blocks of healthy teeth – in the most efficient, effective way possible, so they can work with fluoride to strengthen your smile.

Your examination has revealed the following:

Your specific conditions are shown to the right.

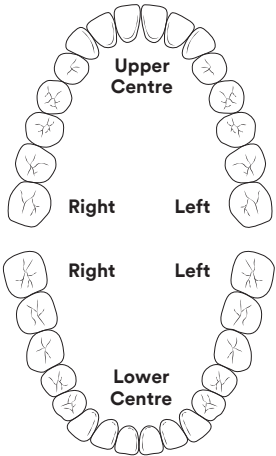

- 1. Cavities
- 2. Root Cavities
- 3. Plaque Build-Up
- 4. “White Spots”
- 5. Tooth Sensitivity
- 6. Gum Disease/Gingivitis
- 7. Periodontal Disease

General conditions:

☐ Oral Malodour

☐ Dry Mouth

☐

Notes:

Refer to the specific 3M product Instructions for Use for more detailed product description, application, intended purpose, indications, contraindications and other information.

Available at select Dental Clinics and your local pharmacy.
