Solventum™ 360 Encompass™ Computer-Assisted Coding System

- Single solution for reviewing documents, annotations and auto-suggested codes for accurate, complete and compliant facility coding
- Seamless integration with Solventum™ Codefinder™ Software, as well as audit and CDI modules
- Delivered through the Solventum™ Cloud Platform, powered by Amazon Web Services (AWS)

The challenge

With evolving regulatory requirements and ICD-11 on the horizon, healthcare organizations are placing increased focus on the technologies used to capture accurate, complete, and compliant coding data. Without the right tools in place, gaps in coding efficiency and accuracy can lead to costly rework and downstream impact.

The solution – A decade of innovation, a future of transformation

During the transition to ICD-10, Solventum set the standard for complete and compliant coding technology, and helped teach health care organizations what to expect from computer-assisted coding. Rather than retraining every coder as guidelines and best practices change, computer-assisted coding promotes adaptability with a combination of Solventum's expert-guided AI and clinical intelligence.

Building upon the coder's expertise, Solventum 360 Encompass computer-assisted coding effectively frees the coder from non-coding tasks like collecting, organizing and analysing the patient documentation. With Solventum Codefinder as its decision support foundation, Solventum 360 Encompass computer-assisted coding auto-suggests codes based on the pertinent patient documentation, and elevates the coder's role, providing comprehensive tools to review, accept and complete a coding session. Transparency within the system allows coders to see the evidence associated with the AI decision and make adjustments within the code path, if appropriate.

Gearing up for an autonomous experience with confidence

When organizations are ready for further automation, Solventum is right there with them taking codes into a more autonomous experience by auto-dropping users' historically accurate and confident auto-suggested codes into the Solventum Codefinder coding pane for final code set completion. This effectively frees up coders' time to focus on complex codes and away from repetitive, simple coding tasks.

Powerful components

The Solventum™ 360 Encompass™ System can help users improve productivity, increase coding accuracy,and reduce rework. This is possible with comprehensive, proven and reliable features and capabilities including:

- Expert, clinical content-driven AI
- A powerful blend of statistical methodologies and expert rules to automate coding improvement
- Annotations and evidence colours and symbols for zeroing in on what's important
- Auto-suggested diagnosis and procedure codes
- Multiple dashboards, workflows, reporting capabilities and quality indicators
- Ongoing support, education and updates
- Key quality metrics identification, including Hospital Harm, Hospital Standardized Mortality Ratio (HSMR) and Quality-Based Procedures (QBPs)
- Online references included in the Solventum™ Coding Reference Software
- Unique evidence view for inpatient and outpatient coding

The power of the Solventum Cloud platform

Our agile cloud solutions can help organizations shift focus away from time-consuming IT maintenance and delivery, and more on business outcomes. Organizations can decrease total cost of ownership in areas such as hardware, software, maintenance and support. This secure and flexible option is integrated with other Solventum solutions.

Contact Solventum Today

For more information on how our software and services can assist your organization, contact your Solventum sales representative, call us at 800-367-2447, or visit us online at **Solventum.com/cac-ca**
