

# The difference is real with the Solventum™ Snap™ Therapy System

Consider early intervention with the Snap Therapy System - disposable negative pressure wound therapy (dNPWT) that makes a real difference for more patients

# The Snap Therapy System offers real patient customization and real-world compatibility

## The Snap Therapy System adapts to each patient and wound

- **Manage more wounds:** supports an environment to promote healing of small, low-exudating wounds with customizable dressings that fit even the most difficult anatomies such as:

Foot abscess

Calcaneal diabetic foot ulcer

Metatarsal amputation

## The Snap Therapy System seamlessly fits into patients' lives for high acceptance

- **Fast application:** up and running in under 10 minutes<sup>1</sup>
- **No interference:** mechanically-powered without the need for batteries, recharge, or noise, it minimally interferes with daily activities such as sleep, social interactions, and mobility<sup>1</sup>
- **Friendly fit:** discreet and comfortable placement (under clothing) anywhere on the body lets patients shower and sleep with it in place<sup>1</sup>
  - Compact (fits in the palm of your hand)
  - Silent (no audible alarms)
  - Lightweight (weighs less than a cell phone)

# The Snap Therapy System provides real NPWT results

Clinical evidence from two multicenter Randomized Controlled Trials (RCTs) demonstrated similar healing outcomes as Solventum™ V.A.C.® Therapy.<sup>1,2a</sup>

The average difference in time to healing was significantly ( $p < 0.0001$ ) shorter (54.27 +/- 28.1 days), when individual Snap Therapy System patients were compared to patients treated with modern wound care protocols.<sup>3</sup>

## The Snap Therapy System provides features and versatility the competition can't deliver<sup>1,2a</sup>

<sup>a</sup> Despite randomization in a multicenter RCT of 115 patients with lower extremity diabetic and venous wounds, the initial wound size was significantly greater in V.A.C.® Therapy patients (n=56) vs Snap Therapy patients (n=59) with a mean of 9.95 cm<sup>2</sup> vs 5.37 cm<sup>2</sup>, respectively;  $p=0.0093$ , and no significant difference was seen in promoting wound closure;  $p=0.9620$ .<sup>1,2</sup> bA foam or gauze filler is recommended if wound is over 0.5cm in depth.

# The Solventum™ Snap™ Therapy System is part of a real support system

The Snap Therapy System is a key component of the Solventum continuum of specialized wound care from acute to out of hospital care settings
