

Temperature Management

Hardware Partnership Program

Program Description

Solventum offers a Temperature Management Equipment Placement Partnership Program, where Solventum will place its owned equipment at health care facilities at no additional charge for use exclusively with Solventum consumable products in accordance with product Instructions for Use and Operator's Manuals. Customers are responsible for purchasing and using a specified number of consumable products per unit placed. Customers are also responsible for maintaining units to the IFU Operator's Manual for the duration of use.

Program Benefits

Warm to the Guidelines

Guidelines recommend the use of core temperature monitoring, pre-warming, intraoperative warming, and post-operative warming with active modalities including forced air warming. Blood and fluid warming are recommended as adjunct warming therapies. Solventum, under its Bair Hugger and Ranger brands, provides a full range of solutions as part of the Partnership Program, that support full adoption to best practice guidelines.

Compliance

In today's healthcare environment, transparency is a vital component of conducting business. We provide a written agreement that covers the evaluation period and beyond, so the parties are clear from the start on the terms and conditions of use.

Confidence

As the unit ownership remains with Solventum, the cost of warming unit repair or replacement of inoperable equipment remains the responsibility of Solventum.*

Cost

State of the art equipment, with evidence-based heat transfer performance, placed within your facility, with no capital equipment investment required.

Alignment to Clinical Needs

Solventum will work with you to place an adequate number of units based on your clinical needs.

*Solventum has responsibility for service repairs of inoperable units while facility is responsible for preventive maintenance of the equipment (filters, hoses). Solventum will not be responsible for damage caused by use inconsistent with the applicable Operator's Manual, or by negligent or intentional acts. Solventum has responsibility for service repairs of inoperable units while facility is responsible for preventive maintenance of the equipment (filters, hoses). Subject to change.
