solventum

Solventum™ Codefinder™ Software

- Provides a sophisticated, easy-to-learn solution for accurate, complete and compliant coding.
- Easily deployed as a web-based application.
- Delivers simplified ICD-10-AM, ACHI and SBS coding via coding pathways utilising sophisticated expert decision logic.

Intuitive coding and decision support

Designed for expert and novice coders alike, the Solventum™ Codefinder™ Software offers more of everything you expect from the world's most popular coding software.

With Solventum experts delivering consistent regulatory updates and clients providing continuous feedback, Codefinder works the way coders work, with all the latest features to address regulatory requirements and operational demands.

With easy-to-use menus, references and prompts, Solventum Codefinder gives coders the functionality they need to code accurately and work productively.

The challenge

Keeping up with the ever-changing rules and regulations of health care is difficult. Understanding and managing regulatory updates, classification guidelines, payment methodologies and the increasing volume of data in the EMR are formidable challenges.

In addition, the work to increase the integrity of clinical documentation and the increased specificity required for health data use have also become part of the coding landscape, adding to the complexity facing HIM professionals. These responsibilities have become key factors in the decision-making processes that can affect every level of a healthcare organisation.

The Solventum solution

Decisions made to improve quality throughout the hospital are based largely on data supplied by the HIM department. New technology and changing regulations have not altered the fact that medical record coding provides the basic foundation of every organisation's data. Today most hospitals depend on the functionality and reliability of Solventum's coding software to build that foundation.

Solventum Codefinder is a sophisticated yet easy-to-use suite of tools that supports coders with powerful coding logic, giving them the confidence by meeting their needs for accuracy and efficiency.

The software is designed to provide appropriate support for novice to expert level coders. It guides the coder through the coding process, covering the full range of situations from complex diabetes scenarios to repetitive or typical patient encounters. At any time, the coder can view the selection of online references to clarify the situation and make appropriate decisions.

With Solventum Codefinder, coders have a flexible tool that supports greater productivity allowing direct coding for routine procedures yet employing consistent rules and expert logic to help address unique or complex coding issues. For all of these reasons, Solventum will continue to use this flagship coding and reimbursement solution as the coding engine for the Solventum™ 360 Encompass™ System as it begins being deployed in the region.

Solventum delivering coder confidence

Today's shortage of qualified coders requires organisations to identify ways to maintain coding accuracy and consistency. Solventum Codefinder gives coders the support and confidence they need to follow correct coding rules and guidelines.

The following references are integrated into the software right where coders need them to expedite the coding process:

- ICD-10-AM/ACHI Codebook
- Australian Coding Standards
- National Coding Advice
- Australian Refined Diagnosis related Groups
- Elsevier's Anatomy Plates
- SBS Alphabetical Index
- SBS Coding Standards
- SBS Summary of Changes

Solventum: The coding experts

For over 30 years, Solventum has been a leader in coding and reimbursement solutions for Australian and New Zealand organisations and has spent over a decade working with other clients in the region. Let our expertise help you stay compliant and efficient. With Solventum Codefinder Software your coders can:

Solventum Works closely with:
- Access an integrated ICD-10-AM code book from within the coding software
- Receive estimated reimbursement values

Powerful components

- Solventum™ Codefinder™ Software-Helps you manage the complex rules and terminology found in mandated rules, standards and guidelines.
- Solventum Grouping Software-Provides accurate AR-DRG grouping capabilities for national and state-based reimbursement methodologies. DRGs are automatically computed during coding to help improve coder productivity, and multiple DRG versions can be calculated simultaneously.
- Reimbursement can be calculated including funding adjustments based on current requirements.
- Hospital Acquired Complications are flagged.

Edits where and when you need them

Code editing is integrated seamlessly so that the codes assigned are continuously edited for quality. Codefinder edits are driven by our hosted Edit Engine and are based on the ICD-10-AM/ACHI coding classification, Saudi Billing System (SBS) Classification, National Coding Advice, Australian Coding Standards and the AR-DRG grouper manual. In addition, there are Propriety Edits based on Solventum Intellectual Property. The Edits provide real time on-screen feedback to coders to ensure compliance to standards and advice. Errors corrected at the time of coding enhance the quality of the coding and prevent the record needing to be retrieved at a later date for review and correction.
