

# Solventum™ Coding and Reimbursement System Plus (CRS+)

Custom edit capabilities explained

# Custom edit capabilities explained

Allows users to create custom edits to help guide correct, consistent and accurate coding according to an organization's unique coding needs.

Helps increase coder productivity with custom edits displayed at the point-of-coding in the Solventum CRS+ workflow.

Based upon severity of ranking, a coder can be required to address the edit before proceeding, thus increasing accuracy and reducing rework.

## Reminders where and when they're needed

The Solventum CRS+ contains a special feature called “custom edits,” which allows organizations to create and deploy customizable coding edits to meet their unique coding needs.

Custom edits can be created based on priority and specific data points, requiring the coder to address the edit notification before completing the record. This helps organizations set up their preferred edits to trigger both in-display notifications and hard stops at the time of coding.

The result? A streamlined coding workflow, decreased record rework, and fewer days not final billed (DNFB).

# The challenge

---

Coders are responsible for moving medical records quickly and accurately through the revenue cycle, while also remembering and applying a litany of rules, regulations and organization-specific coding practices as they code.

But coders are human and human errors happen. When there are issues with records that require audits and rework, record completion can be delayed for weeks or even months. Such delays have a significant negative impact on revenue recognition and patient billing.

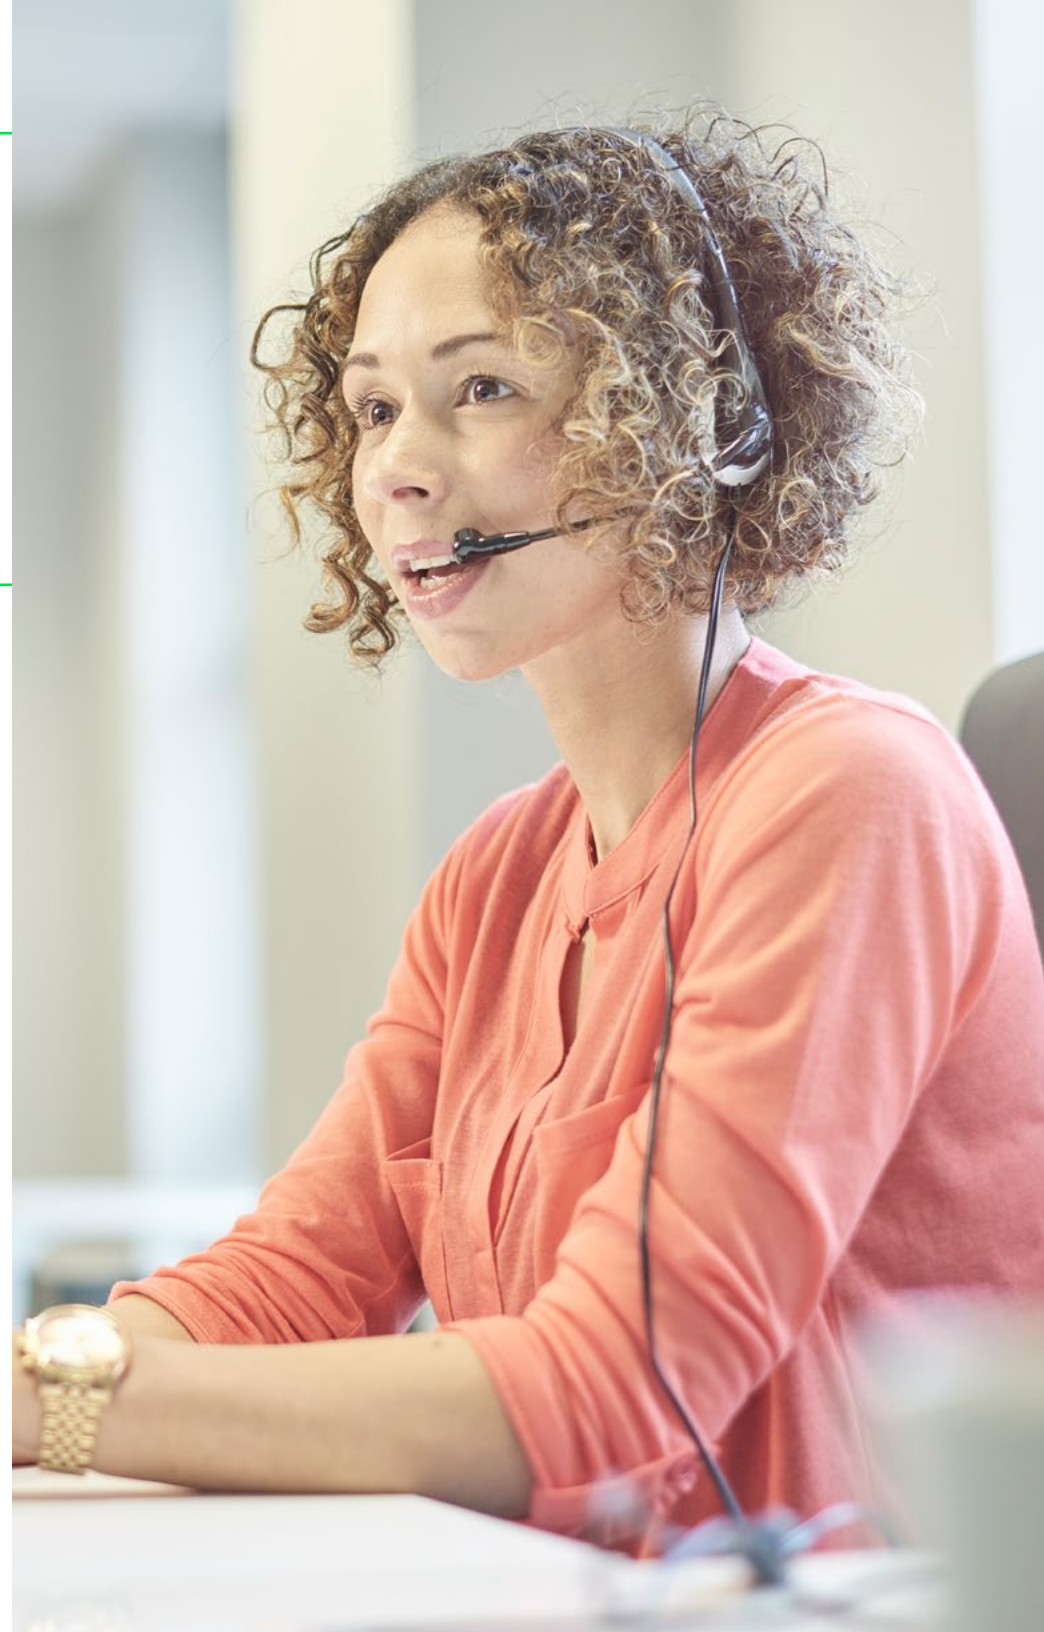

# The Solventum solution

---

Solventum CRS+ custom edits help reduce all the paper reminders and warning notes that typically surround a coder's desk and monitor. By automating all the special need-to-know information, Solventum CRS+ serves it up to coders in their workflow only when they actually need it. And, when rules, regulations or your organization's needs change, you can easily update your custom edits.

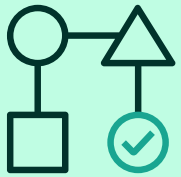

Custom edits are particularly beneficial to organizations with more specialized needs, such as psychiatric facilities, long-term care units, children's hospitals and smaller institutions.

Creating custom edits is simple, and the benefits can boost an organization's bottom line. How? By helping coders address and resolve coding issues before they turn into rework or write-offs.

# Your process. Your edits.

Edits work within the existing coding workflow

Edits are easily created and customized to meet an individual organization's needs

Installation is easy and streamlined, requiring little if any downtime

The system is designed to create both inpatient and outpatient edits

Custom edits can be based upon content available in Solventum CRS+, including: ICD-10-CM diagnosis codes, ICD-10-PCS, CPT® codes, HCPCS codes, CMS DRGs, CMS MDCs, age, gender, LOS, APCs, Solventum™ All Patient Refined Diagnosis Related Groups (APR DRGs) Classification System, Solventum™ Enhanced Ambulatory Patient Groups (EAPGs) Classification System

**Note:** Under a special requirement imposed by the American Medical Association, whenever Solventum refers to “CPT®” or “CPT-4®” within its literature, we have to put this phrase on the page where CPT appears AND at the end in our regular trademark area.

CPT is a registered trademark of the American Medical Association.

# Client-created edit

---

The example shown below is a custom edit created by a Solventum client to remind coders to check for this compliance issue at the time of coding.

**Custom edit:** CPT 12001-12021 (simple suture) is present – ensure that corresponding revenue code is assigned. We have seen situations where the ED department charges a 450-revenue code for a simple suture, but the ED coder assigns CPT 12031 for intermediate repair.

**Solventum nosology edits:**

- 12001-12021 – Simple Repair
- 12031-12057 – Intermediate Repair
- 13100-13160 – Complex Repair

# Solventum can help

With the addition of custom edit capabilities, along with Solventum's patent-pending workflow and flexible reporting tools, organizations can further improve coding efficiency and accuracy with Solventum CRS+.

## Contact Solventum today

For more information on how our products and services can assist your organization, contact your Solventum sales representative, call us at 800-367-2447, or visit us online at [Solventum.com](https://www.solventum.com).
