

Solventum™ Pricer Tables

Key highlights

- Turn complex reimbursement logic into actionable payment intelligence
- Reduce manual maintenance of state- and facility-specific pricing inputs
- Leverage data for payment integrity initiatives

Confidence in payment accuracy and strategy

Expected reimbursement can be difficult to predict and manual to validate due to changing Centers for Medicare & Medicaid Services (CMS) and state agency rules, local case mix and provider-specific factors.

Solventum Pricer Tables pull together relevant data — factoring in state-specific payment policies and facility-specific variables — to enable healthcare organizations to effectively predict expected reimbursement for claims and validate appropriate payment.

Users of [Solventum™ Grouper Plus Content Services \(GPCS\)](#) or [Solventum™ Core Grouping Software \(CGS\)](#) who also license a qualifying grouping or reimbursement scheme can add Solventum Pricer Tables to your workflows and use the data they provide to support payment integrity, underpayment recovery and contracting discussions.

Qualifying reimbursement schemes

- All Medicare reimbursement schemes
- TRICARE Outpatient Prospective Payment System (OPPS)
- Most state Medicaid reimbursement schemes — visit go.solventum.com/pricertables for a full list:
 - + indicates availability of Solventum Pricer Tables
 - ++ indicates availability for outpatient only

Benefits

- Predict expected reimbursement, validate payment accuracy and identify variances
- Support financial forecasting and payment integrity initiatives
- Model contract scenarios, policy updates and fee schedule changes
- Improve financial predictability before regulatory changes take effect
- Enable consistent analytics for trend, benchmark and variance analysis
- Eliminate ongoing maintenance of schedules that are managed and maintained by Solventum
