

## Solventum™ Informed Analytics (IA) Platform

- Provides rich data visualization that enables healthcare leaders and professionals to gain valuable insights that can inform decisions and improvement opportunities
- Supports secure, scalable data sharing for user-appropriate levels of information and functionality
- Allows customers to manage their own data and administer user rights

### Valuable insights for value-based care

Solventum IA is a cloud-based business intelligence platform that enables users to develop and share data insights with the right person at the right time. With actionable information related to healthcare quality and cost in hand, healthcare organizations can effectively move toward value-based care.

### The challenge: Transitioning from fee-for-service to value-based care

The shift to value-based care emphasizes enhanced patient care and improved population health outcomes while lowering costs. As payers and providers work together to achieve these goals, they need a way to access and share timely information to support important data-driven decisions. Making the most of limited resources is crucial; unfortunately, organizations may need to spend them on data management rather than data analysis.

### The solution: Analytics designed for action

Bring inpatient, outpatient, pharmacy and member data together in one place for easier analysis with Solventum IA, a comprehensive reporting tool that helps users visualize data and gain robust insights at the system, provider and patient level. Healthcare organizations can use the platform to securely and instantly share information across the care continuum. Interactive dashboards, charts and reports help identify opportunities for improvement and inform delivery and payment decisions to drive actionable results.

### How Solventum IA can help

- **Care managers** can be informed of changes to their patients' health statuses
- **Financial analysts** can compare cost and quality
- **Executives** can turn insights into business plans
- **Chief medical officers** can quickly identify trends and outliers
- **Network relations leaders** can better understand provider performance

## Features and benefits

**Rich data visualization** allows users to gain insight from:

- **Multi-dimensional interactive reports** that show snapshots of care and trends over time
- **Multiple chart types** that offer options to highlight critical information
- **Dynamic dashboards** that distribute key performance measures and care management data in a concise, executive format
- **Geographic data** that lets users focus on a defined region, represented on high quality maps

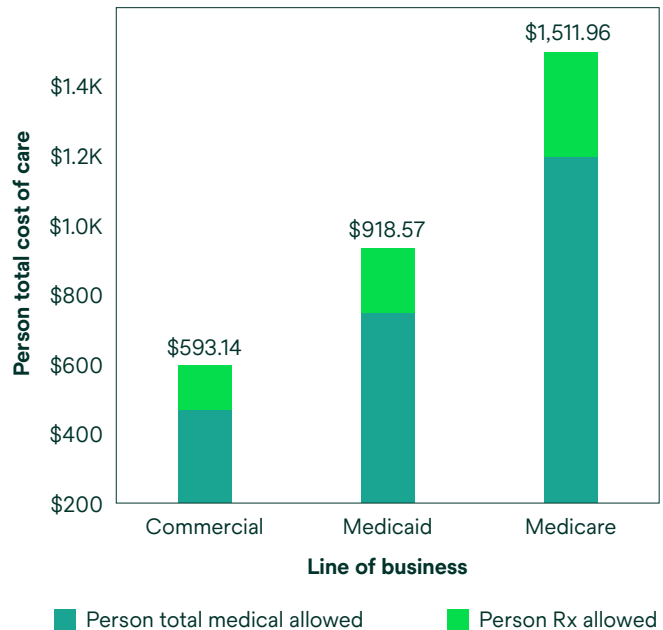

**Full management control** means customers manage access to their own data and administer rights for their users, including:

- **Role-based security** based on user type for strict Health Insurance Portability and Accountability Act (HIPAA) compliance
- **Report analysis** that can be shared from multiple pre-defined report modules
- **Subscription and sharing capabilities** to facilitate automatic and secure report sharing and updating

## Sample dashboard

Using demonstration data, here is an example of the interactive reports that can be built with Solventum IA. Filters allow users to target system, provider and patient-specific opportunities for improvement.

Allowed by type of service	
<i>PMPM = Per member per month</i>	
Person total cost of care allowed PMPM	<b>\$701.60</b>
Person total medical allowed PMPM	<b>\$559.89</b>
Person Rx allowed PMPM	<b>\$141.71</b>
