

AI-powered clinical documentation intelligence for clinicians Solventum™ Outpatient CDI Solution

Solventum™ Outpatient CDI Solution Clinical Insights delivers clinical diagnosis support that is natural to providers and fits seamlessly within their existing workflows by delivering:

Features

Pre-visit patient summaries:

Present longitudinal records showing condition progression, suspected conditions, and care gaps before the patient enters the exam room.

In-visit guidance:

Delivers real-time diagnosis insights integrated natively within your electronic health record (EHR), including risk and quality diagnosis prompts that align with clinical documentation

Benefits

- ✓ Real-time clinical diagnostic insights
- ✓ AI-powered identification of conditions and care gaps
- ✓ Comprehensive patient condition tracking and progression monitoring
- ✓ Improved documentation accuracy for better patient outcomes

Results

A comprehensive patient view that helps physicians understand the full clinical picture and make better-informed decisions.

Why this matters:

Accurate risk assessment and documentation

Comprehensive capture: Identify both documented and suspected hierarchical condition categories (HCCs), ensuring documentation reflects the true complexity of patient care.

Recapture chronic conditions: Use AI-driven reviews to surface conditions requiring annual documentation, preventing inadvertent gaps in the medical record.

Allocate resources appropriately: Ensure accurate risk documentation so patients with complex conditions receive needed resources and support.

In-visit diagnosis guidance designed with physicians in mind

- ✓ Right-timed insights: Provide valuable details before, during and after visits at optimal moments.
- ✓ EHR integrated guidance: Delivers pre-visit planning guidance to providers natively within the EHR for each patient visit to enable risk and quality diagnosis capture and improved care management with minimal disruption to the workflow.
- ✓ Risk and quality diagnosis capture: Allows providers to easily add risk and quality diagnoses into the patient visit (diagnosis list, visit note) to improve capture across target populations.
- ✓ Patient condition and clinical diagnosis insights: Provide a holistic view of each patient's conditions, condition progression, care management alignment and related avoidable care and care gaps.

Improve diagnosis capture. Reduce care gaps. Enhance outcomes.
